

MARMORIN HYDRO

Water-repellent, smooth, translucent lime based marmorino plaster with a transparent finishing coat for total waterproof protection of lime-based surfaces and stone materials

Description	Expressly created for bathrooms or for those rooms where water is present. HYDRO is a translucent slaked lime based Marmorino plaster formulated with special additives that make the surface highly water-repellent. The waterproof and washable texture gives life to smooth surfaces moved by the materic strokes of its application. Hydro Protection is a waterproof finishing coat that has a calm saturated look that is neither glossy nor matt.
Consumption rate	3,0-3,5 kg/m ² for two coats
Interiors / Exteriors	Interiors and Exteriors

MARMORIN

Limed based finishing plaster, polished marble effect

Description	An ecological lime plaster based on lime putty suitable for internal and external finishes and the decoration of new and old buildings with architectural and historical importance. The product has many outstanding characteristics which include high water vapour permeability, colour stability, ease of application, excellent fire resistance and a natural appearance typical of old lime based plasters.
Consumption rate	0,9 - 1,2 kg/m ² per coat
Interiors / Exteriors	Interiors and Exteriors

MARMORIN SAND

Lime based finishing plaster, spotted marble effect

Description	A finishing plaster based on lime putty designed to achieve translucent finishes and smooth surfaces. The specially coloured sands give the wall fascinating natural spotted decorative effects. Specifically recommended for the renovation of historical buildings and walls enriched with cornices, friezes, and pilasters. Due to its natural composition the final colour will appear shaded.
Consumption rate	2,0-2,5 kg/m ² for two coats
Interiors / Exteriors	Interiors and Exteriors

MARMORIN EXTRA

Lime based finishing plaster traditional marmorino effect

Description	Marmorin Extra is a finishing plaster based on lime putty designed to achieve translucent finishes with either a smooth or rough and open texture. It is specifically recommended for the renovation of historical buildings and walls particularly where cornices or other decorative friezes are on the façade. By employing different application techniques it is possible to confer walls with a variety of fascinating and bespoke decorative effects.
Consumption rate	3,0-4,0 kg/m ² for two coats
Interiors / Exteriors	Interiors and Exteriors
